Overview

Switchable film for video projection applications

This specialist optical film can be simply applied to any glass or plexiglas. A simple ON - OFF mode switches the film from being clear to frosted and in its frosted state the film becomes a high definition rear projection screen. The film is available in standard screen sizes ranging from 30" to 92" diagonal or it can be custom cut to fit any glass size; multiple pieces of film can be joined to create large format displays.

The switchable film is manufactured with a self adhesive cling layer (peel and stick), which makes the installation process very quick and easy (no special installation equipment required).

These screens offer a very minimal look which blends easily into any architectural or contemporary interior, making it the ideal screen choice for both historical buildings (churches, museums, theatres and concert halls) and modern hi-tech environments (hotels, offices, stadiums, shopping malls).

Features

- Ultra clear switchable glass wall (110VAC)
- Maximum glass panel size: 1500 x 3000mm
- Multiple panels are positioned side by side to create a HD video projection wall
- HD projection when frosted & holo effect when clear
- Installation kits, transformers and RF remote control

Benefits

- Switches from frosted to clear
- Cost effective
- Panel size up to 3 metres (118")
- Easy maintenance and cleaning
- Low energy consumption
- Custom panel sizes made to order
- Multifunctional

Applications

- Video / advertising screen
- Exhibition / product launch
- POP / POS displays
- Store windows / retail displays
- Boardrooms / office partitions
- Museums / visitor attractions
- Conservatories / sun rooms
